

Eco Calendar 2023

JUNE

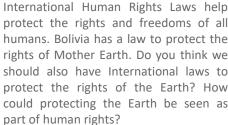

How many reasons can you think of for this? What happens when we harm the environment?

86% of the world's refugees are hosted by less wealthy countries, often referred to as 'developing countries'. What problems do you think this causes? How do you think responsibility for hosting refugees should be decided? Refugees have often experienced traumatic situations in their home country and often also while fleeing too. What can we do to help refugees in our communities feel safe and welcomed?

Over 3 billion people on Earth rely on the biodiversity of the sea and coast to live. Oceans also absorb around a third of the carbon dioxide humans produce. This means protecting ocean environments is important to protect both the people and animals that rely on them, and the climate we all share. What risks to the oceans can you name?
